

Revised System Plan

Inventory and Property Accountability System for TVL

Tanza National Trade School | Draft for client review | October 2026

This document summarizes what we understood from the client interview, the modules and user roles we propose, and how the system would work from delivery to condemnation. Items marked “To confirm” are our assumptions and need the client’s answer.

1. What We Changed Based on the Interview

Client answer	Effect on the system
Teachers are accountable for their assigned items	Every item is linked to the teacher responsible for it.
TVL items are identified by course and teacher	Each teacher is linked to one or more courses. Location is optional for now.
No low-stock alerts	Removed from the dashboard and objectives.
No expiry dates or reorder levels	Removed (no batch numbers, expiry dates, or “expiring” category).
Teachers repair items themselves	No technician assignment or repair scheduling. A simple repair log is kept.
Beyond repair means condemnation	The Condemnation Form is the end-of-life step.
Mr. Reynald Ace inspects and accepts deliveries	He records the inspection and acceptance in the system.
Ms. Profeta (TVL Head) handles transfers	The TVL Head is a system role and decides transfers.

2. Proposed Modules

#	Module	What it does
1	Account and Role Management	Login, role-based access, activate or deactivate accounts.
2	Course Management	Editable list of TVL and Tech Pro courses, and teacher-to-course assignment.
3	Receiving and Inspection	Record a delivery, prepare the Inspection and Acceptance Report, and mark each line complete or incomplete.
4	Inventory	Accepted items become inventory records with number, unit, cost, status, and current teacher.
5	Issuance (MR / ICS)	Assign items to a teacher, generate the MR or ICS, and handle transfers.
6	Condition and Repair Log	Teachers update item condition and add repair notes.
7	Condemnation and Return	Raise and review condemnation requests and generate the Condemnation Form.
8	Reports and Documents	PDF output for IAR, MR, ICS, Condemnation Form, and inventory lists by teacher and course.

#	Module	What it does
9	History Logs	Records who did what and when, across all modules.

3. User Roles and Access

Mr. Ace's exact title is unconfirmed, so his role is shown as Property Custodian (Admin).

Action	Property Custodian (Admin)	TVL Head (Ms. Profeta)	Teacher
Create and manage accounts	Yes	No (to confirm)	Own profile only
Manage courses and teacher assignment	View	Yes	View own
Encode a delivery	Yes	View	No
Inspect and accept (IAR)	Yes	View	No
Add or edit inventory	Yes	View all TVL	View own items
Issue items (MR / ICS)	Yes	View or approve	Acknowledge own
Transfer or reassign items	Carries out	Decides	No
Update condition and repairs	Yes	View	Own items
Request condemnation	Yes	Yes	Own items
Approve condemnation	To confirm	To confirm	No
Reports and PDFs	All	All TVL	Own items
History logs	All	View	No

4. System Workflow

Receiving and acceptance

Accountability and end of life

Every step is recorded in the History Log.

- 1. Delivery arrives.** The Custodian records the Delivery Receipt number, supplier, date, and each item with quantity and unit.
- 2. Inspection.** The system prepares the Inspection and Acceptance Report. Each line is checked against the actual delivery and marked complete or incomplete.
- 3. Acceptance.** Once signed, the delivery is accepted. Rejected or undelivered lines do not enter inventory.

4. **Inventory recording.** Accepted lines become inventory records with the status “In stock, unassigned.”
5. **Issuance.** The Custodian assigns items to a teacher and the system generates the MR or ICS. The teacher becomes accountable for those items.
6. **Monitoring.** Teachers see their own items. The TVL Head sees all items by course and teacher. The dashboard shows counts by course, status, and teacher, plus pending acceptances and condemnations.
7. **Damage and repair.** The teacher marks the item damaged, repairs it, and logs the repair. The status returns to serviceable.
8. **Condemnation.** If the item cannot be repaired, a condemnation request is raised and the Condemnation Form is generated. The item stays linked to its teacher, delivery, and MR or ICS.
9. **Transfers.** When a teacher leaves or items move, the TVL Head decides and the Custodian reissues. The old MR or ICS is closed and a new one is created, so the history stays intact.

5. Questions for the Client

- Who signs each document (IAR, MR, ICS, Condemnation Form)?
- Which items receive an MR and which receive an ICS?
- Who approves a condemnation: the Property Custodian or the TVL Head?
- Are consumables recorded only when issued, or tracked afterward?
- Can the technician role be removed, since teachers do the repairs?
- Who creates user accounts?
- How are partial deliveries handled?
- Are items lent between teachers, or only assigned to one teacher?
- What is Mr. Ace’s exact title?
- What are the complete TVL and Tech Pro course lists, and can a teacher handle more than one course? (Pending from Ms. Profeta.)

Here is a direct comparison between what is currently written in your paper (the Capstone Project Outline) and what you actually need to have based on your client's real-world requirements.

Overview of Core Differences

Category	Current Paper (Old Plan)	Actual Required System (New Plan)	Action Needed for Paper
System Scope & Purpose	General maintenance, equipment repair tracking, and stock monitoring system.	Official DepEd inventory management, document tracking, and accountability system (MR/ICS/IAR/Condemnation).	Revise Introduction, Scope & Limitations, and Conceptual Framework.
User Roles	3 Roles: Administrator, Technician, and Faculty.	3 Roles: Property Custodian (Admin), TVL Head (Miss Profeta), and Teachers. (<i>Drop Technician role</i>).	Update Role Matrix, Use Case Diagrams, DFDs, and Functional Requirements.
Item Categorization	Consumable, Non-Consumable, Expiring Materials, and Equipment.	Equipment vs. Lower-value Semi-expendable items (linked to MR or ICS issuance). Drop expiry dates/batches.	Remove expiration fields from ERD and Inventory Module documentation.

Inventory Locations	Tracked across multiple physical TVL laboratory locations.	Department/Course assignment based (location tracking is optional/dropped).	Simplify Inventory schema and drop location filter requirements.
Alerts & Dashboards	Low-stock alerts, expiration warnings, and frequently borrowed item counters.	Pure status & count overviews (by course, teacher, pending acceptances, pending condemnations).	Remove low-stock and expiration warning alerts from Objectives and Scope.
Document Generation	Standard PDF output for general inventory reports.	Formal DepEd PDF form generation: IAR (Inspection and Acceptance), MR (Property Acknowledgement), ICS (Inventory Custodian Slip), and Condemnation Forms .	Expand Report Generation specifications across all relevant modules.
Maintenance & Repairs	Centralized maintenance scheduling and assignment to dedicated Technicians.	Simplified repair logging performed directly by Teachers (no repair scheduling/technician assignment).	Reframe Maintenance Tracking into a simple Repair Log.

End-of-Life Process	Unspecified/Generic status tracking ("damaged", "missing").	Formal Condemnation and Return workflow for items beyond repair.	Add Condemnation Module to System Design and ERD.
----------------------------	---	---	---

Detailed Chapter-by-Chapter Changes Required

1. Objectives & Scope (Chapter 1)

- **Objectives 3f & 3h:** Remove references to low-stock alerts, expiration monitoring, and borrowed item dashboards. Replace them with objectives for generating official DepEd documents (IAR, MR, ICS, Condemnation Form).
- **Scope Text:** Clarify that inventory items are created through a **Receiving & Inspection** workflow (Delivery Receipt → IAR) rather than direct manual entry.

•

2. System Design & Data Architecture (Chapter 3)

- **User Roles:** Remove all Technician interaction use cases. Replace with TVL Head approval flows and Teacher accountability assignments.
- **Database / ERD Changes:**
 - Remove **batch_number** and **expiry_date** fields from the **INVENTORY** entity.
 -
 - Add entities/tables for **Deliveries/IAR**, **Issuances (MR/ICS)**, and **Condemnation Requests**.
 -
 - Replace the **TECHNICIAN** assignment logic in repair records with direct teacher updates.
 -

3. Functional Modules Overview

1. **Account Management:** Admin (Custodian) creates accounts; TVL Head sees course-wide data; Teachers see only their assigned items.
- 2.
3. **Receiving & Inspection:** Record deliveries via Delivery Receipt numbers and generate IARs.
- 4.
5. **Inventory & Issuance:** Convert accepted items into inventory with property numbers; generate MR/ICS forms for teachers.
- 6.
7. **Condition & Repair Log:** Teachers mark items as damaged/repaired directly in the system.
- 8.
9. **Condemnation & Disposal:** Formal workflow to retire condemned items beyond repair.
- 10.
11. **Reports & Logs:** PDF generation for all DepEd forms and complete historical audit trail.
